Sure thing. I let the crew know that they need to wear their PFD's over their jackets. The weather is warming up and they have taken their jackets off for now. I have also reminded the crew to wear hard hats when operating the davat/retrieving the moorings as there is potential for overhead hazards. The Vemco representative has just been dropped off at SIL boat ramp and will not be continuing activities with the crew for the remainder of day as no firmware will need to be updated on the AR's.

The vessel is currently docked at the NRC office in SIL to grab some sun glasses and a grappling hook or the next site (AR-A7). AR-07 is in 60ft of water. The crew will attempt to release the acoustic receiver but they anticipate having to use the grappling hook.

Thank you,
Jonni

Thanks Jonni. If you could make sure they don't zip the jackets over any pfd's, as that ends them nope able (and would make it harder to breathe when falling in the water with a hydrostatic vest).

Hi Sean. Yes everyone has been wearing their PFD's this morning. The Vemco representative (photographed in the Navy blue coat) has a PFD under his jacket (zipper open for access), with his back turned. It's hard to see, but the top bib of the PFD around their necks pokes out a bit. That may have been hard to identify in the last email. Here are some clearer photos of crew members with PFDs more visible, from the front.

Thank you,

Jonni

Thank you Jonni. Looks like at least one person is missing a PFD, could you verify that all are wearing some class of PFD?

Good morning,

The Next Generation vessel is currently stationed at Target location AR-A26 (RM 8) downloading data to a jump drive. The Pre-RD group has successfully located and downloaded data, updated battery, firmware, and memory on AR-25. Included are photos of the retrieval AR-A26
